Inverter Operation Instructions

AT900 series Vector Universal Inverter

V1.0

A brief of the parameters table for the AT900 series high-performance vector frequency converter

The manual provides precautions and guidance for user type selection, installation, parameter setting, site commissioning, fault diagnosis and daily maintenance and maintenance

Chapter I Product information

1.1 Inverter series

	Model	AT900 series			Braking Resistor	
		Adaptive motor		Output Current:A	W	Ohm
		KW	HP			
220 V	901-0K7G1	0.7	1	4.0	80	150
	901-1K5G1	1.5	2	7.0	100	100
	901-2K2G1	2.2	3	9.6	100	70
	901-3K7G1	3.7	5	17.0	300	50
	901-5K5G1	5.5	7.5	25.0	400	45
380 V	903-0K7G3	0.7	1	2.1	100	750
	903-1K5G3	1.5	2	3.8	300	400
	903-2K2G3	2.2	3	5.1	300	250
	903-3K0G3	3.0	4	7.2	400	200
	903-3k7G3	3.7	5	9.0	400	150
	903-5K5G3	5.5	7.5	13.0	500	100
	903-7K5G3	7.5	10	17.0	1000	75
	903-11G3	11	15	25.0	3000	43
	903-15G3	15	20	32.0	3000	32
	903-18.5G3	18.5	25	36.0	3000	25
	903-22G3	22	30	44.0	4000	22
	903-30G3	30	40	58.0	5000	16
	903-37G3	37	50	70.0	6000	13

1.2 Product Specification

Project		Standard
Basic Function	System	Current vector universal frequency converter
	Drive	High-efficiency drive of the Induction Motor
	Maximal Frequency	Vector control: 0-500Hz
		V/F control: 0-3200Hz.
	Carrier Frequency	0.5KHz-16KHz
		The carrier frequency can be adjusted
	Frequency resolutiony	Digital setting: 0.01Hz
		Simulation setting: ±0.025%
	Control Mode	Open-loop vector control (SVC)
		V/F control
	Starting torque	Type-G Mode: 0.3Hz/150% (SVC).
		Type-P Mode: 0.3Hz/100%

Project		Standard
	Range of	1: 100(SVC)
	Stable	±0.5%(SVC)
	Overload capacity	Type G:150% Rated Current 120s;180% for 10s
		Type P:120% Rated Current for 60s;150% for 3s
	Torque rise	Automatic torque increase; Manual torque increase: 0.1% -30.0%
	V/F curve	Three ways: straight line; multi-point; N secondary V / F curve (1.2,1.4,1.6,1.8, and
	Curve Acc/Dec mode	Line or S curve acceleration and deceleration mode, four Acc/Dec times, Acc/Dec time range 0.0-6500.0s
	DC Braking	Brake frequency: 0.00Hz-Maximum frequency; Brake time:.0s-36.0s; Brake current value: 0.0% -100.0%
	Jog control	Jog frequency range: 0.00Hz-50.00Hz; Acc & Dec time: 0.0s-6500.0s.
		Up to 16 segment speed runs with a built-in PLC or control terminal
	built-in PID	It can easily realize the process control closed-loop control system
	AVR Function	When the input voltage jitter, the output voltage can be automatically kept constant
	Stall control	Automatically limited the current and voltage to prevent frequent overvoltage tripping.
	Fast current limiting	Minimize the overcurrent fault and protect the normal operation of the frequency converter
	Torque limit and control	Automatically limit the torque during operation to prevent frequent overcurrent tripping, and the vector mode of closed loop can realize torque control
	Instant power non-stop	When instantaneous power failure is achieved, load feedback energy compensation is used to maintain the converter running in a short
	Timing	Set the time range of 0.0Min-6500.0Min.
Oper ating	Command source	Control panel,Control terminal, Serial port,can be switched in multiple ways
	Frequency source	Panel potentiometer, Number given,External analog voltage/current input, and serial port input.can be switched in multiple ways
	Input Terminal	Five digital input terminals
		1 analog quantity input terminal;
		One 0-10V voltage or 0-20mA current input;

2

Project		Standard
	Output Terminal	1 digital output terminal
		1 relay output terminal (TA, TB, TC)
		1 analog output terminal, supporting 0-10V or 0-20mA voltage output
	Protection function	Power on motor short circuit detection, input and output phase loss protection, overcurrent protection, overvoltage protection, undervoltage protection, overheating protection and overload protection, etc
loop The environment	Use place	Indoor, not direct sunlight, no dust, corrosive gas, combustible gas, oil fog, steam, water or salt, etc
	Above sea level	under 1000m 2C116699
	Ambient temperature	-10℃ ~ + 40℃ (ambient temperature is 40℃ ~50℃, please decrease the amount)
	humidity	Less than 95%RH, anhydrous condensation
	vibrate	Less than 5.9m/s (0.6g)

Function indicator lamp description

◆Hz:Frequency display indicator lamp
◆V: Voltage indicator lamp
◆A: Current indicator lamp
◆ERR: fault indicator lamp
◆F / R: Forward and Reverse indicator lamp
◆L / R: Communication control indicator lamp
◆RUN: Running indicator lamp

Key symbol	Name	Function declaration
PRG	Programming key	Menu enters or exits, with parameter modification
ENT	Determine the key	Enter the menu and confirm the parameter setting
▲	Upper key	Increment of data or function codes
▼	Down key	Diminishing data or function codes
DISP	Shift key	Select the parameter modifier bit and the display contents
RUN	Run the key	Start the inverter under the keyboard operation mode
STOP	Stop / Reset key	Stop / reset operation,
JOG	Jog key	Limited to the P08.01 function code

Set the parameter method:

1、 Press the **PRG** button to display the P 0.00,
2、 The ▲ ▼ and **DISP** keys select the parameter number to modify, and the **ENTER** key enters the parameter,
3、 ▲ ▼ and **DISP** keys modify parameter values, **ENTER** key save parameters,
4、 If you need to modify other parameters, repeat 2,3, steps, such as modification completion,
    Return to the frequency interface using the **PRG** key.

Chapter 3 Summary table of functional parameters:

P00, Monitoring group			
P00.00	running frequency	0.00 ~ 320.00Hz（P01.22=2）	-
P00.01	Set the Frequency	0.0 ~ 3200.0Hz（P01.22=1）	-
P00.02	Busbar voltage (V)	0.0V ~ 3000.0V	-
P00.03	Output voltage (V)	0V ~ 1140V	-
P00.04	Output Current (A)	0.00A ~ 655.35A	-
P00.05	Output power (kW)	0 ~ 32767	-
P00.06	Output torque (%)	-200.0% ~ 200.0%	-
P00.07	DI input state	0 ~ 32767	-
P00.08	DO output state	0 ~ 1023	-
P00.09	AI1 voltage (V)	0.01V	-
P00.10	AI2 Voltage (V) or current (mA)	0.00V ~ 10.57V 0.00mA ~ 20.00mA	-
P00.12	count value	0 ~ 65535	-
P00.13	Length value	0 ~ 65535	-
P00.14	Load speed display	0 ~ 65535	-
P00.15	PID setting	0 ~ 65535	-
P00.16	PID feedback	0 ~ 65535	-
P00.17	PLC stage	0 ~ 65535	-
P00.18	Pulse input frequency	0 ~ 100kHz	-
P00.19	Feedback speed (Hz)	-320.00Hz ~ 320.00Hz -3200.0Hz ~ 3200.0Hz	-
P00.20	Runtime Remaining	0.0 ~ 6500.0Min	-
P00.21	AI1 Voltage before correction	0.000V ~ 10.570V	-
P00.22	AI2 Voltage/Current before correction	0.000V ~ 10.570V 0.000mA ~ 20.000mA	-
P00.24	linear speed	0 ~ 65535m/Min	-
P00.25	Current power time	0 ~ 65535Min	-
P00.26	Current running time	0.0 ~ 6500.0Min	-
P00.28	Communication setting	-100.00% ~ 100.00%	-
P00.30	Frequency X Display	0.00Hz ~ 500.00Hz	-
P00.31	Frequency Y Display	0.00Hz ~ 500.00Hz	-
P00.32	View any memory address value	0 ~ 65535	-
P00.35	Target torque, (%)	0.0° ~ 359.9°	-
P00.37	Power factor Angle		-
P00.39	Target voltage of VF separating	0V ~ Motor rated voltage	-
P00.40	Output voltage of VF separating	0V ~ Motor rated voltage	-

P00.41	DI input status display	–	–
P00.42	DO input status display	–	–
P00.43	DI function status display 1	(function 01. function 40)-	–
P00.44	DI function status visual display 2	(Function 41. Function 80)-	–
P00-45	fault message	–	–
P00-59	Set the frequency of (%)	-100.00% ～ 100.00%	–
P00-60	Running frequency (%)	-100.00% ～ 100.00%	–
P00-61	Inverter state	0 ～ 65535	–

★—modifiable parameter under any condition

☆—not modifiable parameter under run status

●—the actual detected parameter, not modifiable

FC	name	Set range	Factory value	modify
P01 Basic functional Group				
P01.00	G/P type	1: Type G (constant torque load model) 2: Type P (fan and water pump model)	1	☆
P01.01	1. Motor control mode	0: Speed Sensorless Vector Control 2: V/F control model	2	★
P01.02	Operation command channel	0: Operation panel run command channel ("L/R" lights off) 1: Terminal Run channel ("L/R" lights on) 2: Communication command channel ("L/R" lights flashing)	0	☆
P01.03	Main frequency source X	0: Digital set (preset frequency P01.08, keypad ▲/▼ key,power loss) 1: Digital set (preset frequency P01.08, keypad ▲/▼ key,Power drop memory) 2: AI1 analog set (0-10V) 3: AI2 analog set(0-10V or 20mA); 4: Panel Potentiometer; 5: Pulse set (0～50KHZ DI5); 6: Multistage speed run set 7: Simple PLC set; 8: PID Control set; 9: Communication set.	4	★
P01.04	Secondary frequency source Y	Same as P01.03 (Main frequency source X) set	0	★

7

P01.05	Limit selection of Y when frequency superposition	0: Compared to the 【P01.10】 Maximum frequency 1: Relative to the frequency source X	0	☆
P01.06	Limit of Y when frequency superposition	0% ～150%	100%	☆
P01.07	Frequency source	Single digit: Frequency source selection 0: Main frequency source X 1: Main and Secondary operation results (operation relationship is determined by Ten digits) 2: Main frequency X and Secondary frequency Y switch 3: Switch between main frequency X and Main and Secondary operation results 4: The frequency Y switches with Main and Secondary operation results Ten digits: Frequency operation relationship of X and Y 0: X +Y　　　　　　1: X -Y 2: Maximum of the Two,　3: Minimum of the Two.	00	
P01.08	Preposition frequency	0.00Hz ～ Maximum frequency【P01.10】	50.00 Hz	☆
P01.09	Running direction	0: Consistent direction, 1: Opposite direction	0	☆
P01.10	Maximum output frequency	Vector: 50.00Hz ˜ 500.00Hz V/F:　50.00Hz ～ 2000.00Hz	50.00 Hz	★
P01.11	Upper limit frequency source	0: 【P01.12】Set up　　　1: AI1 Set up 2：AI2 Set up　　　　　3: AI3 Set up 4: Pulse set (0～50KHZ DI5); 5: Communication Setup	0	★
P01.12	Upper limiting frequency	【P01.14】～【P01.10】	50.00 Hz	☆
P01.13	Upper limit frequency bias	0.00Hz ～【P01.10】	0.00Hz	☆
P01.14	Lower limit frequency	0.00Hz ～【P01.12】	0.00Hz	☆
P01.15	Carrier frequency	0.5kHz ～ 16.0kHz	For Model	☆
P01.16	Carrier frequency Adjust with temperature	0: No,1: Yes	1	☆
P01.17	Acceleration time 1	0.00s ～ 650.00s（P01.19=2） 0.0s ～ 6500.0s（P01.19=1）	For Model	☆
P01.18	Deceleration time 1	0s ～ 65000s（P01.19=0） Reference frequency【P01.25】		☆
P01.19	Time unit of Acceleration and deceleration time	0: 1　　seconds 1: 0.1　seconds 2: 0.01 seconds	1	☆
P01.21	Bias frequency of frequency Y when superposition	0.00Hz ～ Maximum output frequency【P01.10】	0.00Hz	☆

P01.22	Resolution of Frequency	Resolution of all frequency commands.	2	★
P01.23	Power down memory for Digital Frequency setting	0: No memory 1: Memory	0	☆
P01.24	Motor parameter group selection	0: Motor parameter group 1, 1: Motor parameter group 2.	0	★
P01.25	Reference frequency of Acceleration and deceleration time	0: Maximum frequency【P01.10】 1: Setting frequency 2:100Hz	0	★
P01.26	Runtime frequency instruction UP/DOWN benchmark	0: Operation frequency, 1: Setting frequency	0	★
P01.27	Command source bundled frequency source	**Single digit:** Operation Panel command binding frequency source selection 0: No binding 1: Digital set 2：AI1 3：AI2 4: AI3 5: Pulse set (0～50KHZ DI5); 6: Multi segment speed; 7: Simple PLC 8:PID 9: Communication Set **Ten digit:** Terminal command binding frequency source selection **100 digit:** communication command binding frequency source selection **Thousand digit:** Automatically run the binding frequency source selection	0000	☆
P02 Asynchronous Motor parameter group 1				
P02.00	Motor type	0: Ordinary asynchronous motor, 1: Variable frequency asynchronous motor	0	★
P02.01	Rated power of motor	0.1kW ～ 400.0kW	According to the Model Of the Inverter	★
P02.02	Rated voltage of Motor	1V ～ 2000V		★
P02.03	Rated current of Motor	0.01A ～ 655.35A (Inverter power <=55kW) 0.1A ～ 6553.5A (Inverter power> 55kW)		★
P02.04	Rated frequency of motor	0.01Hz～ Maximum output frequency【P01.10】		★
P02.05	Rated speed of motor	1rpm ～ 65535rpm		★
P02.06	Stator resistance of motor	0.001Ω ～ 65.535Ω (Inverter power <=55kW) 0.0001Ω ～ 6.5535Ω (Inverter power> 55kW)	Tuning Parameter	★
P02.07	Rotor resistance of Motor	0.001Ω ～ 65.535Ω (Inverter power <=55kW) 0.0001Ω ～ 6.5535Ω (Inverter power> 55kW)		★
P02.08	Leak resistance of Motor	0.01mH ～ 655.35mH (Inverter power <=55kW) 0.001Mh ～ 65.535mH (Inverter power> 55kW)		★
P02.09	Mutual resistance of Motor	0.1mH ～ 6553.5mH (Inverter power <=55kW) 0.01mH ～ 655.35mH (Inverter power> 55kW)		★

P02.10	No-load current of the Motor	0.01A ~ P02.03 (Inverter power <=55kW) 0.1A ~ P02.03 (Inverter power > 55kW)		★
P02.37	Tuning selection	0: no-operation 1: Tuning at Motor stationary 1 2: Motor dynamic tuning 3: Tuning at Motor completely stationary 2	0	★
P03 Vector control parameters of motor group1				
P03.00	Speed loop proportional 1	1 ~ 100	30	☆
P03.01	Speed loop integration time 1	0.01s ~ 10.00s	0.50s	☆
P03.02	Switch frequency 1	0.00 ~ 【P03.05】	5.00Hz	☆
P03.03	Speed loop proportional 2	1 ~ 100	20	☆
P03.04	Speed loop integration time 2	0.01s ~ 10.00s	1.00s	☆
P03.05	Switch frequency 2	P03.02 ~Maximum output frequency 【P01.10】	10.00Hz	☆
P03.06	Vector control of the shift gain	50% ~ 200%	100%	☆
P03.07	SVC torque filtering time constants	0.000s ~ 0.100s	0.050s	☆
P03.09	Torque upper limit source under speed control mode	0: P03.10 setting 1：AI1; 2：AI2; 3: AI3; 4: Pulse set (DI5); 5: Communication Setting; 6: MIN (AI1, AI2) 7: MAX (AI1, AI2)	0	☆
P03.10	Upper torque limit under speed control mode	0.0% ~ 200.0%	150.0%	☆
P03.13	Proportional gain of excitation regulation	0 ~ 60000	2000	☆
P03.14	Integral gain of excitation regulation	0 ~ 60000	1300	☆
P03.15	Proportional gain of torque regulation	0 ~ 60000	2000	☆
P03.16	Integral gain of torque regulation	0 ~ 60000	1300	☆
P04 V/F Control Parameters				
P04.00	VF curve setting	0: linear curve V/ F 1: Multipoint curve V/ F 2: Decreasing torque curve 1 (Square curve) 3: Decreasing torque curve 2 (1.2 power) 4: Decreasing torque curve 2 (1.4 power) 6: Decreasing torque curve 2 (1.6 power) 8: Decreasing torque curve 2 (1.8 power) 10: VF completely separation mode 11: VF semi-separation mode	0	★

10

P04.01	Torque boost setting	0.0% (Automatic lifting torque); 0.1%~30.0%	By Model	☆
P04.02	Torque boost cutoff point	0.00Hz ~Maximum output frequency 【P01.10】	50.00Hz	★
P04.03	Multi-point V/F Freq. 1	0.00Hz ~ 【P04.05】	0.00Hz	★
P04.04	Multi-point V/F Voltage 1	0.0% ~ 100.0%	0.0%	★
P04.05	Multi-point V/F Freq. 2	【P04.03】 ~ 【P04.07】	0.00Hz	★
P04.06	Multi-point V/F Voltage 2	0.0% ~ 100.0%	0.0%	★
P04.07	Multi-point V/F Freq. 3	【P04.05】 ~ Motor Rated frequency 【P02.04】	0.00Hz	★
P04.08	Multi-point V/F Voltage 3	0.0% ~ 100.0%	0.0%	★
P04.09	V/F control Slip frequency compensation	0.0% ~ 200.0%	0.0%	☆
P04.10	V/F Over excitation gain	0 ~ 200	64	☆
P04.11	Oscillation suppression gain for V/F	0 ~ 100	By Model	☆
P04.13	Voltage source by VF separated	0: Digital Settings 【P04.14】 1: AI1 2: AI2 3: AI3 4: Pulse Setting (DI5) 5: Multiple instruction 6: Simple PLC 7: The PID 8: communication Setting Note: 100.0%, corresponding to the motor rated voltage	0	☆
P04.14	Voltage for VF separation	0V ~ Motor rated voltage	0V	☆
P04.15	Voltage rise time of VF separation	0.0s ~ 1000.0s Note: Time when 0V rises to rated voltage of motor。	0.0s	☆
P04.16	Voltage dorp time of VF separation	0.0s ~ 1000.0s Note: Time when Rated voltage of motor dorp to 0V	0.0s	☆
P04.17	Shutdown mode of VF separation	0: The frequency and voltage drop to 0 separately; 1: Frequency drops after the Voltage drop to 0	0	☆
P04.18	Over-current stall action current	50% ~ 200%	150%	★
P04.19	Suppression of Over current stall	0: Disable, 1: Enable.	1	★
P04.20	Suppression's gain of Over current stall	0 ~ 100	20	☆
P04.21	Compensation coefficient of action Over current stall	50% ~ 200%	50%	★
P04.22	Over-voltage stall action voltage	650.0V ~ 800.0V	760.0V	★
P04.23	Suppression of Over-voltage stall	0: Disable, 1: Enable.	1	★
P04.24	Suppression's Freq. gain of Over-voltage stall	0 ~ 100	30	☆

P04.25	Suppression's Voltage gain of Over-voltage stall	$0 \sim 100$	30	☆
P04.26	Maximum rise frequency limit for Over-voltage stall	$0 \sim 50Hz$	5Hz	★
P05 group, Input Parameters				
P05.00	DI1 terminal function	0: No function; 1: Forward running(FWD) or Running;	1	★
P05.01	DI2 terminal functional	2:Reverse running (REV) or Forward/Reverse switch 3: three-wire running control 4: forward jog control (FJOG) 5: Reverse jog control (RJOG) 6: Freq. Increase(Terminal UP) 7: Freq. decrease(Terminal DOWN) 8: Free shutdown control 9: External reset signal input(RST) 10: Suspend operation; 11: External fault normally-open (NO) input 12: Multi-speed 1 13: Multi-speed 2	4	★
P05.02	DI3 terminal functional	14: Multi-speed 3 15: Multi-speed 4 16: ACC/DEC time select 1(TT1) 17: ACC/DEC time select 2(TT2) 18: Frequency source switch 19: UP/DOWN Freq. zero clearing (terminal, keyboard) 20: Run command Switch terminal 1 21: VFD ACC/DEC prohibit 22: PID control Pause 23: PLC state reset 24: Pendulum frequency Pause 25: Counter input 26: Counter reset 27: Length count input 28: Length reset 29: Torque control Disable	9	★

			30: Pulse Setting (only DI5 can setting, P05.04=30) 31: Reserved; 32: DC braking immediately; 33: External fault input (normally closed, NC) 34: Frequency modification Enables 35: PID input signal reversed; 36: External parking terminal 1 37: Run command Switch terminal 2 38: PID integral Pause; 39: Frequency X switches with the Preset frequency 40: Frequency Y switches with the Preset frequency 41: Motor selection terminal 1 43: The PID Parameters switch 44: User defined fault 1 45: User defined fault 2 46: Speed control / Torque control switch		
P05.03	DI4 terminal functional		12	★
P05.04	DI5 terminal function (only DI5 can setting Pulse function, P05.04=30)	47: Emergency stop 48: External parking terminal 2 49: Slow ate DC braking 50: Run time cleared; 51: Two-wire control / Three-wire control switch 52: Reversal Disable;	13	★
P05.10	DI filtering time	0.000s ~ 1.000s	0.010s	☆
P05.11	Terminal control Mode	0: Two-wire control mode 1, 1: Two-wire control mode 2, 2: Three-wire control mode 1, 3: Three-wire control mode 2.	0	★
P05.12	Frequency adjusting step size	0.001Hz/s ~ 65.535Hz/s	1.00Hz/s	☆
P05.13	Min. input of AI curve 1	0.00V ~ P05.15	0.00V	☆
P05.14	Corresponding value of AI curve 1's Min. input	-100.0% ~ +100.0%	0.0%	☆

7. Fault alarm and Countermeasures

Displays	Fault name	Possible cause of failure	Trouble shooting
Err01	Power module protection	Motor power is too high or Wiring short circuit or Power module damaged	Remove the motor wire and start it again. If there is any problem, repair the Inverter
Err02	Undervoltage fault	The input voltage is abnormal or the Power relay is not engaged or the voltage detection fault	Check the power supply voltage or seek service from the manufacturer
Err31	Overvoltage during acceleration	The input voltage is abnormal	Check the input power supply
		Restart when the motor rotates	Set to start after DC braking
Err32	Overvoltage during deceleration	The deceleration time is too short	Extend the deceleration time
		The input voltage is abnormal	Check the input power supply
Err33	Overvoltage at constant speed	The input voltage is abnormal	Check the input power supply
Err60	Inverter overload	Improper setting of V/F curve or torque.	Adjust the V / F curve and the torque boost amount
		Low input voltage.	Check the power supply voltage
		The acceleration time is too short	Extend the acceleration time
		The motor load is too heavy	Select a more powerful Inverter
Err61	OverCurrent during acceleration	The acceleration time is too short	Extend the acceleration time
		The Inverter power is too small	Select Inverter with high power level
		Improper setting of V/F curve or torque.	Adjust the V / F curve or the torque boost amount
Err62	OverCurrent during deceleration	The deceleration time is too short	Extend the deceleration time
		The Inverter power is too small	Select the Inverter with high power level
Err63	OverCurrent at constant speed	Low input voltage.	Check the power supply voltage
		motor stall or load mutation is too large	Check the load
		The Inverter power is too small	Select a more powerful Inverter
Err64	Motor overload	Improper setting of V/F curve or torque.	Adjust the V / F curve or the torque boost amount
		Low input voltage.	Check the power supply voltage
		motor stall or load mutation	Check the load

Displays	Fault name	Possible cause of failure	Trouble shooting
		is too large	
		Motor overload protection coefficient is not set correctly	Set the motor overload protection coefficient correctly
Err65	Wave by wave current limiting fault	Same with motor Overload	Same with motor Overload
Err40	hardware malfunction	Water, insects, etc	restart can not resume back to the factory repair
Err41	EEPROM R/W failure	EEPROM hitch	Seek a service from the manufacturer
Err42	Control power failure	The input power supply is not in the specification range	Adjust the voltage to the specification requirements
Err46	Current detection failure	Current sampling circuit fault	Seek a service from the manufacturer
		Drive circuit failure	Seek a service from the manufacturer
Err11	External equipment failure 1	External fault input terminal 1 is closed	Disconnect the External fault terminal and clear the fault (pay attention to check the cause)
Err12	Communication failure	485 Communication failed	Check the 485 connection
Err13	Accumulated runtime arrives	The cumulative running time reaches the set value	Clear record by Parameter initialization function
Err15	External equipment failure 2	External fault input terminal 2 is closed	Disconnect the External fault terminal and clear the fault (pay attention to check the cause)
Err16	Power on time arrives	The cumulative power on time reaches the set value	Parameter initialization function clear records
Err17	Contact / relay failure	External equipment input terminal fault	Disconnect the External fault terminal and clear the fault (pay attention to check the cause)
Err08	Power module overheated	Bad cooling fan or overheated ambient temperature	Check the Fan or heat dissipation or wait for cool to try again
Err90	Switching motor fault at runtime	Poor contact of motor line or switch between motor and Inverter	The Inverter must be directly connected to the motor to check that the motor line is loose
Err91	Ground short circuit fault	Short to earth fault	Disconnect ground line (pay attention to check the cause)
Err92	Input phase loss	Check input power line	Seek a service from the manufacturer

Displays	Fault name	Possible cause of failure	Trouble shooting
Err93	Output phase loss	output power line loss or a phase circuit for detecting current is abnormal	Check the output voltage and Check output power line
Err94	Motor overspeed failure	Motor speed exceeds the normal speed	Check whether the load has other power
Err95	Speed deviation failure	The speed gap is too large than the normal speed	Check the motor load
Err96	PID feedback loss at runtime	Poor contact with the PID sensor signal	Check the sensor signal
Err97	Load drop fault	Motor line is disconnected	Check the motor line
Err98	Motor over temperature	The motor overheat	Check motor temperature
Err99	Motor tuning fault	The motor parameters are not set according to the nameplate or the motor line is in poor contact	Set the motor parameters according to the nameplate and check the lead from the Inverter to the motor
ErrH1	Water shortage	Water shortage failure	Check for lack of water
ErrH2	Full water early warning	The water is full	Restore normal water pressure
ErrH3	High water pressure failure	Force shutdown failure	Too high water pressure, check the water pressure

5. Setup Description

When the P17.00 is set to non-0 value, the parameter protection password is set. You must enter the password before modifying the parameters. Cancel the password, and the P17.00 needs to be set to 0.

The parameter menu in user custom parameter mode is not password protected.

P01~P23 group is basic function parameter,

P00 group is monitoring function parameter.

The symbols in the function table are described as follows:

"☆": The set value of this parameter can be changed when the Inverter is Stop and Running state;

"★": The set value of this parameter cannot be changed when the Inverter is in the running state;

"●": The value of the parameter is the actual detected record value and cannot be changed;

"*": It means that the parameter is the "Manufacturer Parameter" and is limited to the manufacturer setting to prohibit the user from operating.
